WHAT IS IMMEDIATE DENTAL IMPLANT TREATMENT?

Immediate dental implant treatment refers to receiving fully functional implant supported teeth in less than 72 hours. This technology has exceptional success rates (95%). A one-piece implant also known as basal implant or Strategic implant is used in this treatment. The strength provided by the implant is excellent and provides naturally looking, aesthetically pleasing natural teeth in just 3 days. This procedure is simple, fast, effective, minimally invasive and result oriented.

- Permanent teeth within 2-3 days.
- Simple procedure, almost No pain and swelling
- Successful dental implant placement even in extreme cases like atrophied jaws.
- Long-lasting results in medically compromised patients
- No bone-grafting procedure required
- Successful implant placement in diabetic patients
- Successful implant placement in chain smokers.
- No post-implant infections like periimplantitis

BEFORE

AFTER

Immediate Functional
Loading (Strategic®) Implantology

VS

Conventional Implantology

Strategic® Implantology	Conventional Implantology
<p>No WAITING-TIME for the implants to heal. Fully functional prosthesis is provided in 3-4 days</p>	<p>3-6 months of healing time. Provisional prosthesis until healed. Very slow healing period</p>
<p>NO NEED of large supply of bone for basal implants. Surgery can be performed with the available bone.</p>	<p>Complex surgery totally dependent on the available bone quantity. High rejection rate in case of no bone.</p>
<p>Minimally invasive surgical procedure. NO sinus lift, NO bone grafting, NO augmentation. Flapless procedure</p>	<p>Complex surgical procedure, time-consuming. In many cases, grafting, sinus lift and augmentation to be additionally performed, thus increasing the cost significantly.</p>
<p>One simple and straight forward surgical case.</p>	<p>Extra surgical procedure likely possible.</p>
<p>Anyone and everyone can be a candidate for basal implants.</p>	<p>Patients undergone cancer radiation, diabetic, hypertensive and medically compromised patients cannot receive treatment.</p>
<p>Single-piece strength provided by implant is excellent.</p>	<p>Two-piece implant might possess bio-mechanical mishaps, resulting in implant failure</p>
